The simple solution for complex situations

Protect and monitor all hidden corners with BauWatch Brighteyez

When a site is full of hidden corners, you need a security system that will effectively keep them on show. Criminals will often find entry points in places where they think they cannot be seen, and this is where you'll find the most damage. When offenders feel unobserved, nothing deters them from the crimes they intend to commit. To keep your site safe and leave no hiding spots, you will need to implement a high-tech monitoring device that can catch these vandals red-handed.

Reducing false alarms

Brighteyez is the perfect solution. The system has the potential to record continuously for 400 days on one full battery charge, which is the equivalent of 50,000 events. The camera detects movement and reacts by taking a cluster of still images that are sent to our control centre. To reduce false alarms and save time for our monitoring station, the clever AI technology recognises movement from something that isn't human (i.e. a site banner waving or an animal) and filters this out.

On average, Brighteyez detects and disregards 95% of harmless triggers, meaning our control centre can spend more time on dealing with real alarms rather than false activations.

Brighteyez is ideal for:

- Keeping an eye on hidden corners
- Outdoor surveillance
- Complementing the security of our CCTV towers

3 Advantages

- ✓ Crystal clear imagery even at night
- ✓ Autonomous system with ecofriendly rechargeable batteries
- ✓ Remote arming/disarming

TECHNICAL SPECIFICATIONS

Brighteyez

Detection range	30m
Type of detection	Infrared sensor with ai filtration
Internet connection	Integrated secure connection
Power supply	Rechargeable batteries
Alarm follow up	24/7 connection with our control centre
Weight	700g (including battery)
Required space	Flexible use in any preferred space
